

Yes, there are currently 4 pages in the summary screen.

Current Page Structure

Looking at the code, the pages are defined (implicitly) as:

```
C

// Likely in pokemon_summary_screen.h or similar
#define PSS_PAGE_INFO          0
#define PSS_PAGE_SKILLS        1
#define PSS_PAGE_BATTLE_MOVES  2
#define PSS_PAGE_CONTEST_MOVES 3
#define PSS_PAGE_COUNT         4    // ← This is the key constant
```

The code uses `PSS_PAGE_COUNT` in many places (`minPageIndex`, `maxPageIndex`, loops, `bgTilemapBuffers[PSS_PAGE_COUNT]`, etc.).

How to Add a Fifth Page

Adding a 5th page is **non-trivial** but doable. Here's a **step-by-step guide**:

1. Define the new page

In `pokemon_summary_screen.h` (or wherever the page constants are):

```
C

#define PSS_PAGE_INFO          0
#define PSS_PAGE_SKILLS        1
#define PSS_PAGE_BATTLE_MOVES  2
#define PSS_PAGE_CONTEST_MOVES 3
#define PSS_PAGE_5TH_PAGE      4    // New page
#define PSS_PAGE_COUNT         5    // ← Increase this!
```

2. Add a new background tilemap

You need a 5th background layout.

In `pokemon_summary_screen.c`:

- Add a new decompressed tilemap buffer in `struct PokemonSummaryScreenData`:

```
C
u16 bgTilemapBuffers[PSS_PAGE_COUNT][2][0x400]; // Already supports 5 if
you changed the define
```

- In `DecompressGraphics()` (case 6+), add decompression for your new page's tilemap:

```
C
case 5: // adjust indices
    DecompressDataWithHeaderWram(gSummaryPage_YourNewPage_Tilemap,
                                sMonSummaryScreen-
>bgTilemapBuffers[PSS_PAGE_5TH_PAGE][0]);
    sMonSummaryScreen->switchCounter++;
    break;
```

You'll also need to create `gSummaryPage_YourNewPage_Tilemap` (graphics data).

3. Add window templates

Extend `sSummaryTemplate[]` and create a new `sPage5Template[]` similar to the others.

```
C
static const struct WindowTemplate sSummaryTemplate[] = {
    // ... existing ones
    [PSS_LABEL_WINDOW_5TH_PAGE_TITLE] = { ... },
    // ...
};
```

Then create data windows for your new page:

```
C
static const struct WindowTemplate sPageFifthTemplate[] = { ... };
```

4. Extend text printer arrays

```
C
```

```

static void (*const sTextPrinterFunctions[])(void) = {
    PrintInfoPageText,
    PrintSkillsPageText,
    PrintBattleMoves,
    PrintContestMoves,
    PrintFifthPageText,      // ← New
};

static const TaskFunc sTextPrinterTasks[] = {
    Task_PrintInfoPage,
    Task_PrintSkillsPage,
    Task_PrintBattleMoves,
    Task_PrintContestMoves,
    Task_PrintFifthPage,     // ← New
};

```

5. Handle page switching logic

In `ChangePage()`, `SetDefaultTilemaps()`, `PutPageWindowTilemaps()`, `ClearPageWindowTilemaps()`, `SetTypeIcons()`, etc., add cases for your new page.

Especially important:

- `IS_MOVE_PAGE(page)` macro — you may want to update or create `IS_SPECIAL_PAGE()` if needed.
- `HidePageSpecificSprites()`
- Background priority / scrolling logic in `PssScrollRight` / `PssScrollLeft`

6. Handle input / mode restrictions

In `ShowPokemonSummaryScreen()`:

```

C
case SUMMARY_MODE_NORMAL:
    sMonSummaryScreen->minPageIndex = 0;
    sMonSummaryScreen->maxPageIndex = PSS_PAGE_COUNT - 1;  // Now 4
    break;

```

7. Create the actual content

You'll need functions like:

...and in `Task_HandleInput()`:

- `PrintFifthPageText()`
- `Task_PrintFifthPage(u8 taskId)`

And add logic in `Task_HandleInput()` if the page needs special buttons.

Pro Tips

1. **Start small** — Make the 5th page a simple "Stats+" or "Ribbons" or "Origins" page first.
 2. **Graphics** — You'll likely need to edit the summary screen background graphics (`.bin` files) or create a new one.
 3. **BG Management** — The screen uses 4 BGs cleverly with sliding. Adding a 5th page may require careful BG priority management.
 4. **Memory** — `bgTilemapBuffers[PSS_PAGE_COUNT][2][0x400]` uses quite a bit of EWRAM. Watch out for stack/heap limits.
 5. **Pagination dots** — `DrawPagination()` will automatically support 5 pages once `PSS_PAGE_COUNT` is updated.
-

Would you like me to:

- Give you the exact code diffs for adding a blank 5th page?
- Suggest what kind of 5th page would be easiest (e.g. "Ribbons" page, "IV/EV detailed", "Origins")?
- Help with graphics/tilemap setup?

Just tell me what you want the fifth page to **show**, and I can give more targeted code.
